

# BASIC PHOTOGRAPHY

DCC AND PPC COMBINED TRAINING  
2025

A top-down photograph of a person with long dark hair, wearing a light blue sweater, lying on their back in a field of tall, dry grass. They are holding a red smartphone horizontally with both hands, positioned over their face. The text "TAKING PICTURES IS TOO EASY!" is overlaid in large, white, bold, sans-serif capital letters across the center of the image, partially covering the person's hands and the phone.

**TAKING PICTURES IS TOO  
EASY!**

# ALL YOU HAVE TO DO IS

- SEE SOMETHING
- POINT A DEVICE AT IT
- PUSH OR TAP SOMETHING
- **SUCCESS!!!**

**HOWEVER, MAKING THE PHOTOGRAPH YOU  
WANT TAKES PRACTICE**

***THE PRIMARY OBJECTIVE  
OF THIS CLASS IS TO  
HELP YOU LEARN TO  
PHOTOGRAPH WITH  
INTENTION***

# IMAGE CAPTURE

IT IS NOT ONLY IMPORTANT TO KNOW  
HOW TO OPERATE YOUR CAMERA,

YOU MUST ALSO UNDERSTAND **WHY**  
YOU WOULD DO ONE THING OR  
ANOTHER!

**HOW ARE YOU GOING TO  
BECOME A MORE INTENSIONAL PHOTOGRAPHER?**

**LEARN  
BY  
DOING!!!**

# HOMEWORK

1. Go for a walk around your neighborhood, or some nearby location, and take at least 10 pictures.
2. Download and process (or not. You may shoot this assignment as JPEGs on Auto or Program mode if you prefer).
3. Analyze each of your 10 images by asking the follow questions:
  1. What was it in this scene that compelled me to photograph it? (don't say Larry!)
  2. What story or narrative am I trying to tell with this image?
  3. Did I succeed?
  4. If not, what do I need to do next time?

# WHAT IS PHOTOGRAPHY?

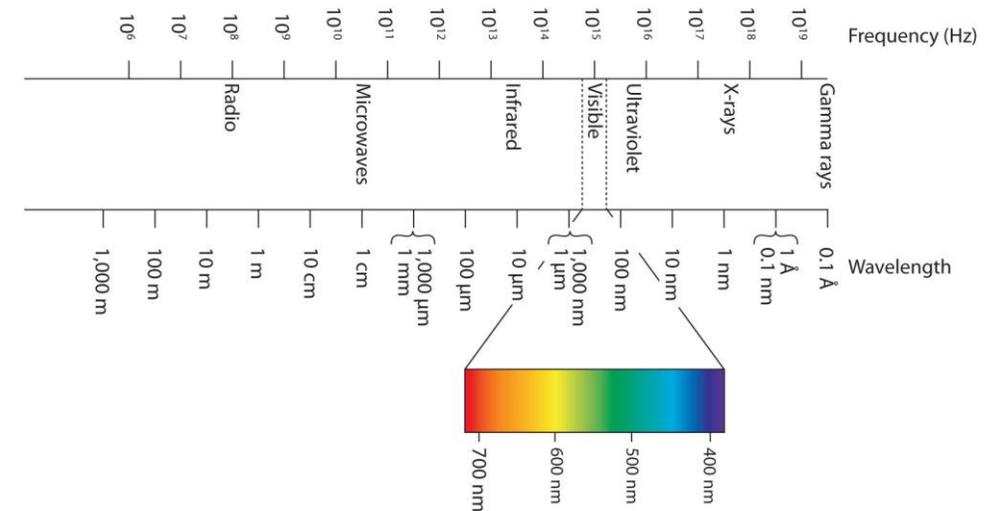

Derived from Greek, ***PHOTOGRAPHY*** literally means to “***draw***” with “***light***”.

# WHAT IS LIGHT?

Electromagnetic Spectrum

VISABLE LIGHT BEHAVES AS A WAVEFORM AND A PARTICAL (**PHOTON**) AT THE SAME TIME. LIGHT THEREFORE, HAS QUALITIES (**COLOR**) AND QUANTITY (**INTENSITY**) WE CAN USE TO MAKE PICTURES.

# HOW DO WE CAPTURE LIGHT?

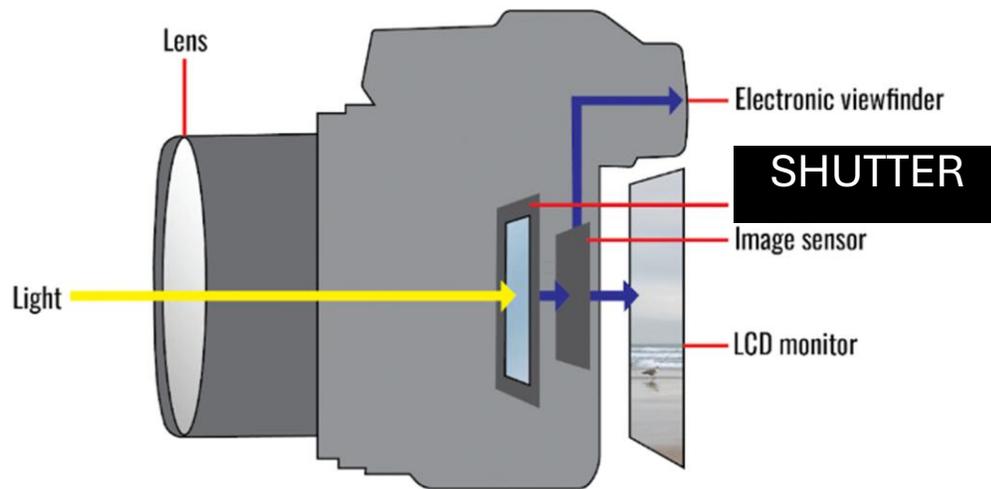

## Camera obscura

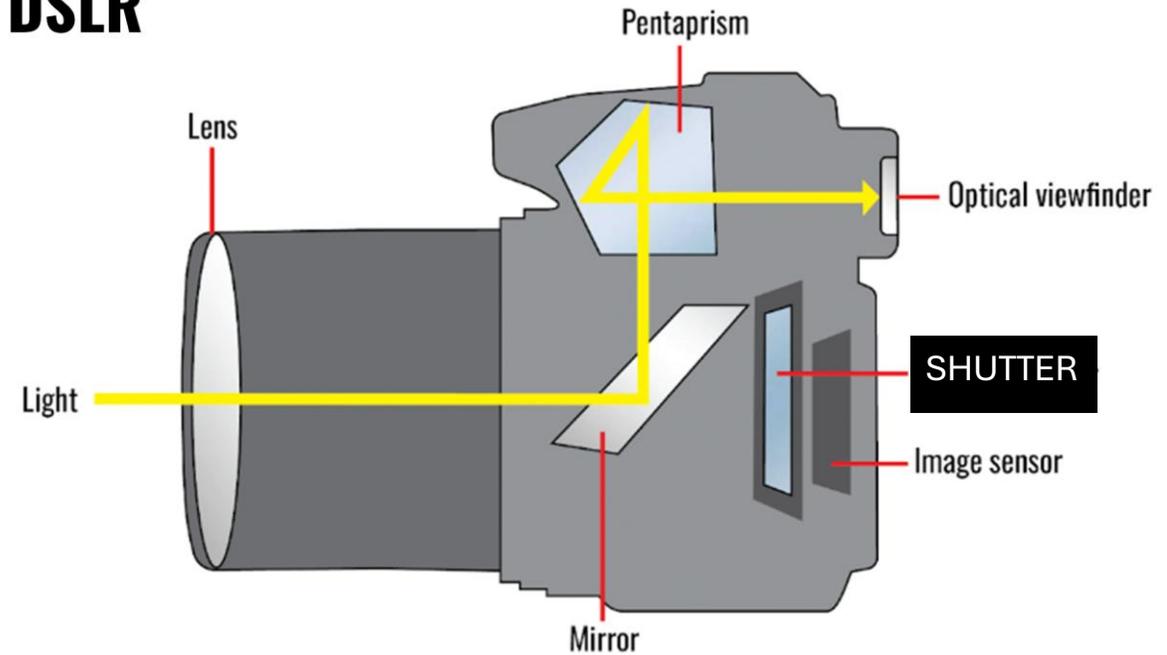

# HOW DO WE CAPTURE LIGHT?

— Light — Digital data

## Mirrorless

## DSLR

# WHAT IS EXPOSURE?

Very simply, exposure is the number of photons recorded by the camera's sensor.

← YOUR SENSOR

# WHAT IS A FRACTION?

If we begin with one (1) thing and divide it into two (2) we get 2 things which are  $1/2$  of the original thing. Then, if we divide each of those in half again, we end up with the original “1” divided into “4” or  $1/4$ . Notice that with each division, the denominator (bottom number) becomes larger than the previous denominator(s). **The bigger the denominator number, the smaller the thing.**

Thus: 1,  $1/2$ ,  $1/4$ ,  $1/8$ ,  $1/16$ ,  $1/32$ ....

***It is essential to understand fractions to appreciate shutter speeds and apertures.***

# HOW IS EXPOSURE CONTROLLED?

There are **two camera settings** that determine the number of photons reaching the camera sensor:

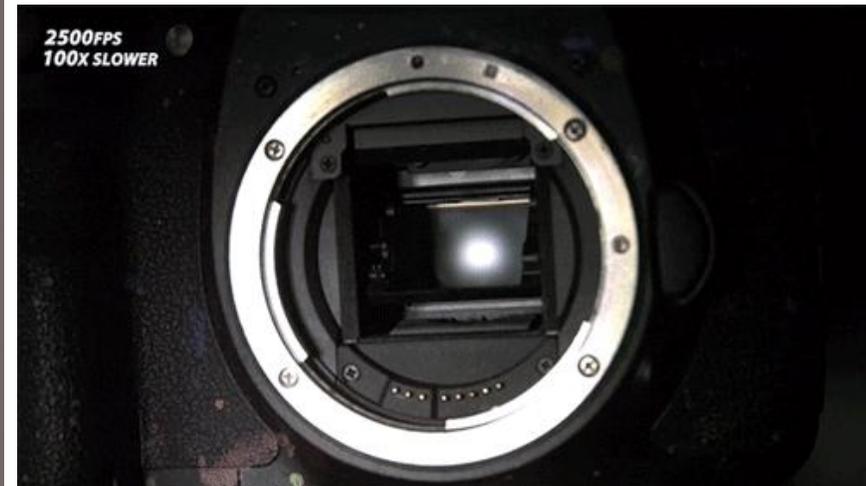

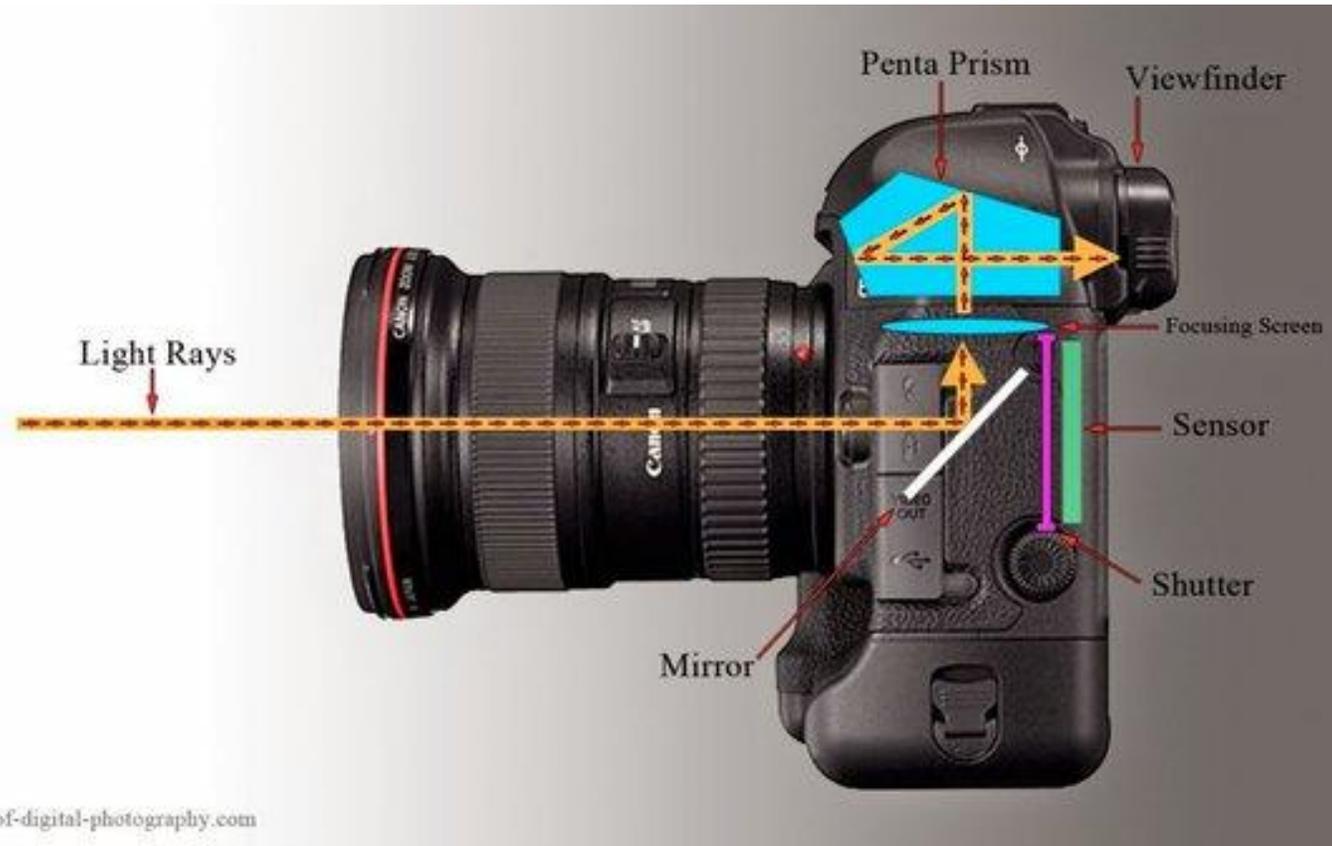

- 1. SHUTTER SPEED**
- 2. LENS APERTURE**

← YOUR SENSOR

# BASIC PHOTOGRAPHY: CAPTURE SHUTTER SPEED

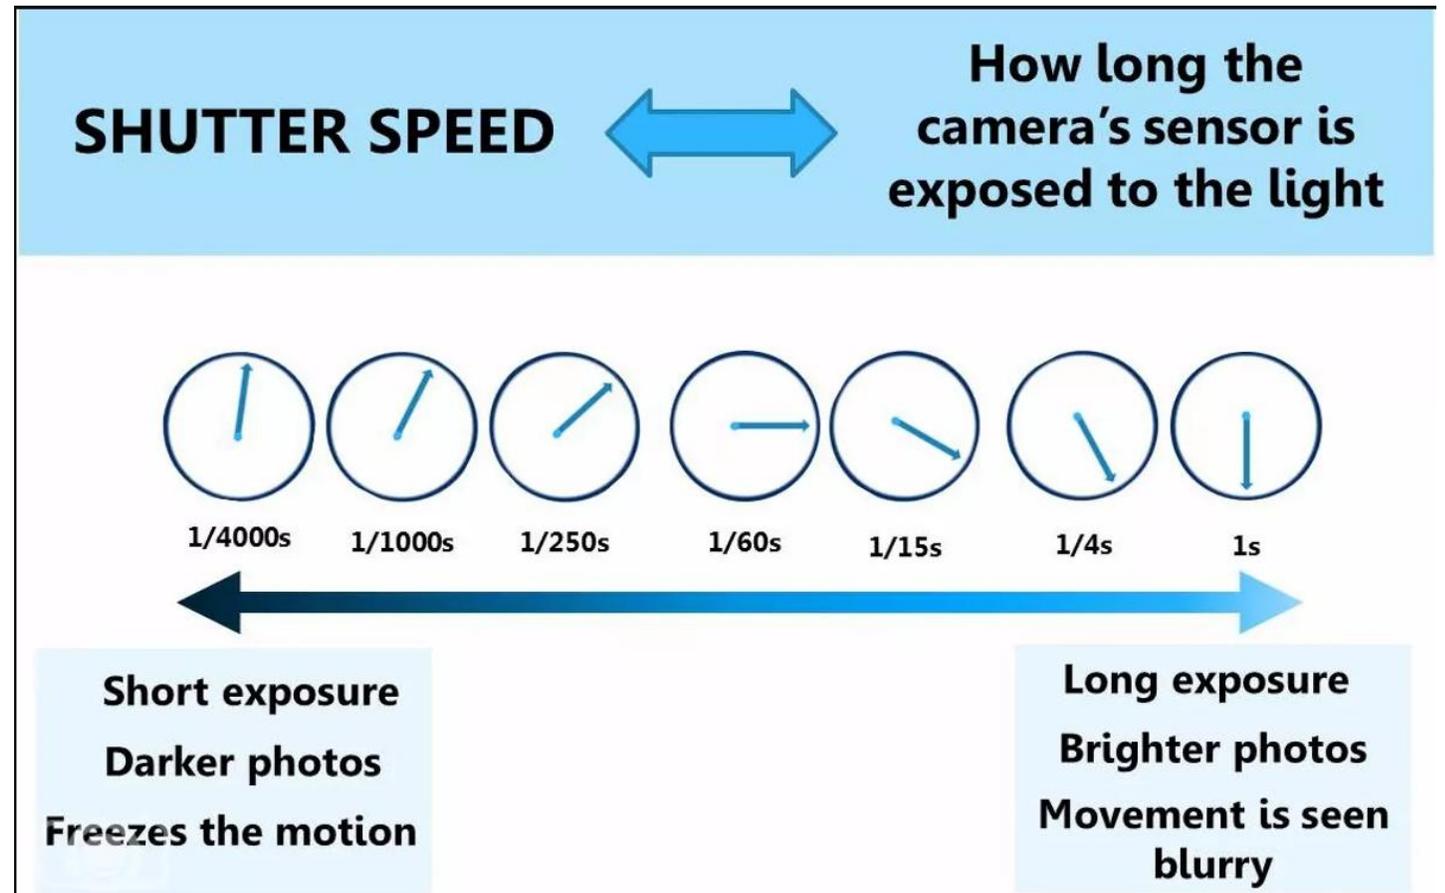

## WHAT IS SHUTTER SPEED?

# SHUTTER SPEEDS

**HOMEWORK:** READ YOUR CAMERA'S INSTRUCTION MANUAL TO LEARN HOW TO CHANGE SHUTTER SPEED WITHOUT LOOKING AWAY FROM THE VIEWFINDER. REPEAT FOR F STOPS.

# WHY CONTROL SHUTTER SPEED?

## SHUTTER SPEED

### MOTION

1"

1/2 sec

1/4 sec

1/8 sec

1/15 sec

1/30 sec

1/60 sec

1/125 sec

1/250 sec

1/500 sec

1/1000 sec

SLOW SHUTTER SPEED

FAST SHUTTER SPEED

### LIGHT

MORE LIGHT

LESS LIGHT

# BASIC PHOTOGRAPHY: CAPTURE APERTURE

## WHAT IS AN APERTURE?

### APERTURE SCALE

Less light

More light

f/32   f/22   f/16   f/11   f/8   f/5.6   f/4   f/2.8   f/2   f/1.4

Narrower

Wider

1 stop increases exposure

# BASIC PHOTOGRAPHY: CAPTURE APERTURE

## WHAT IS AN **F STOP**?

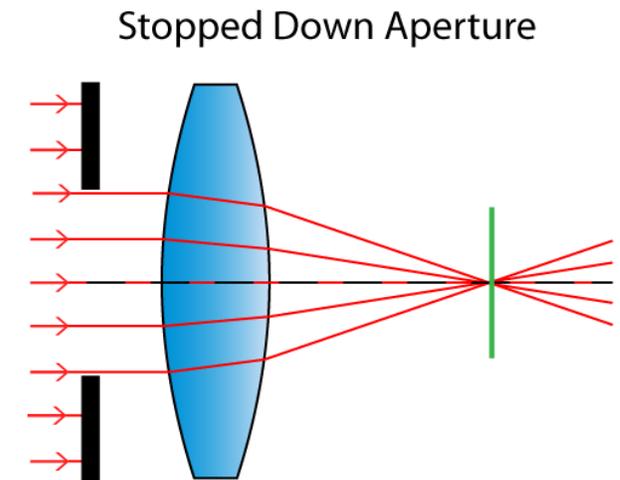

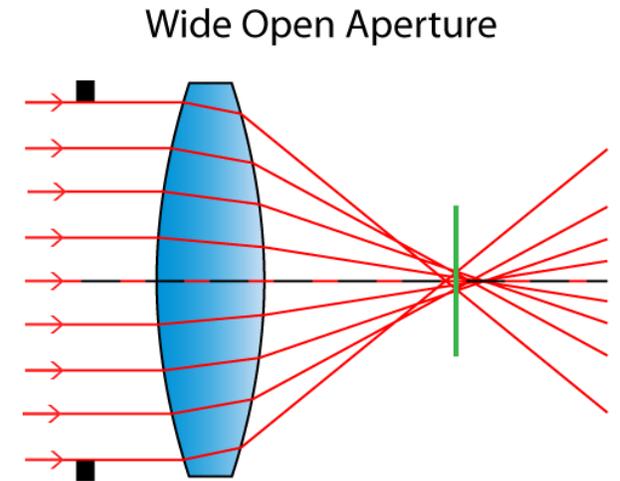

The f-stop number is calculated by dividing the focal length of the lens by the diameter of the aperture. For example, if a lens has a focal length of 50mm and an aperture diameter of 25mm, the f-stop would be 2 (50/25).

# BASIC PHOTOGRAPHY: CAPTURE APERTURE

The aperture helps  
determine the:

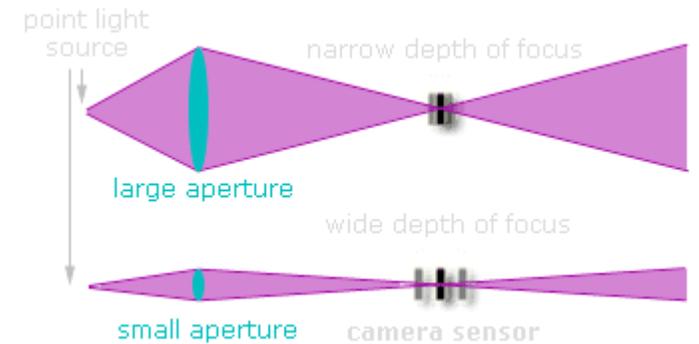

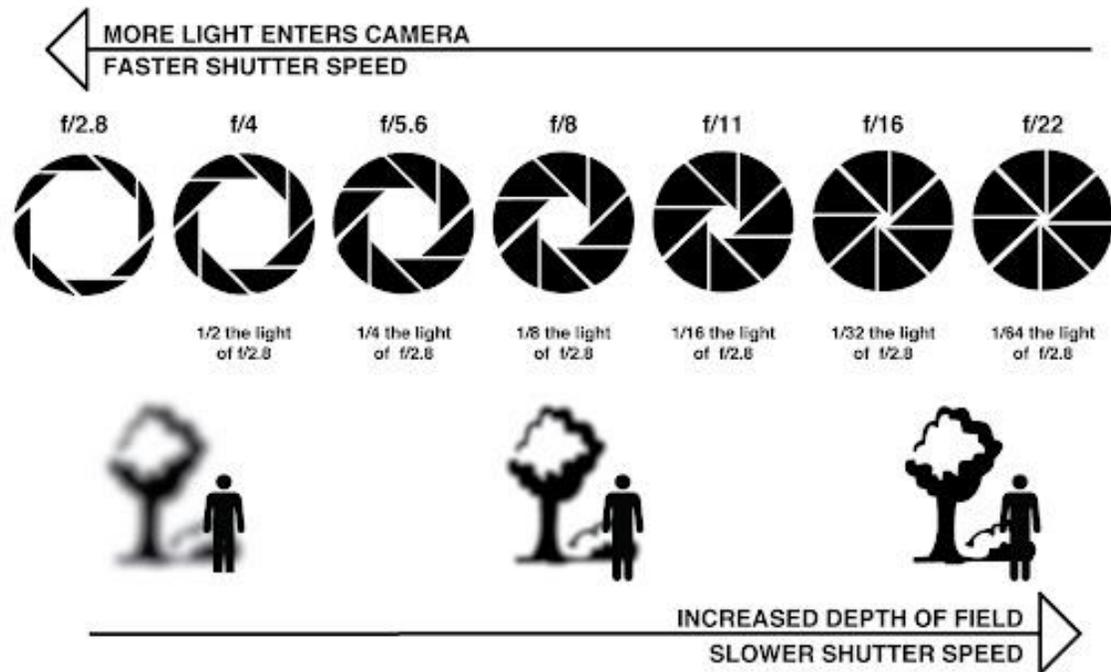

Amount of light reaching  
the sensor

And the **DEPTH OF FIELD**

# WHAT IS DEPTH OF FIELD?

The depth of field is the zone within a photo that *appears acceptably sharp* and in focus.

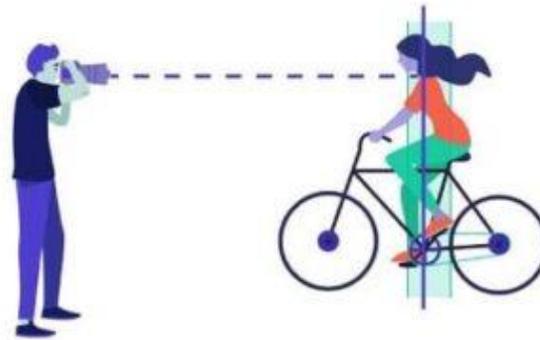

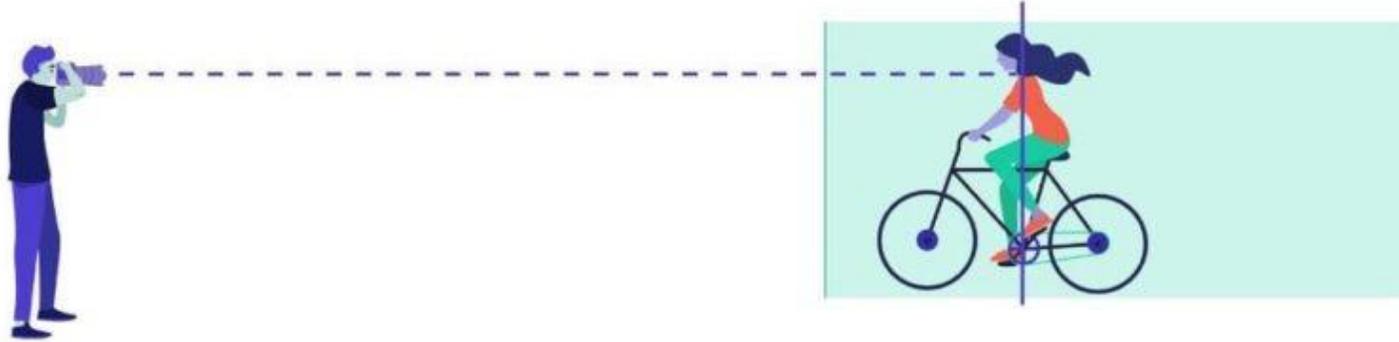

# WHAT DETERMINES DoF?

There are three main factors that determine the depth of field in a photo. They are:

1. The aperture of the lens (f-stop)
2. The focal length of the lens
3. The distance between your lens and your subject

# Focus Distance and DoF

**NOTICE THAT DoF IS  
GENERALLY, 1/3 IN FRONT  
AND 2/3 BEHIND THE  
FOCAL POINT**

Focal length 10mm  
Distance 0.25m

Focal length 50mm  
Distance 1.25m

Focal length 200mm  
Distance 5m

# MORE HOMEWORK

1. For these exercises, use a tripod, if you have one. If not, find a location where you can rest your camera on a sturdy support.
2. Set your camera on “Shutter Priority”. Make 10 photographs of a moving subject(s) (cars on the freeway, bicycles at the park, airplanes landing at Love Field..). Vary the shutter speed beginning with 1 sec and progressing to 1/500<sup>th</sup> sec. Process your images and study the effect of shutter speed on sharpness.
3. Set your camera on “Aperture Priority”. Arrange the scene such that there are three easily identifiable objects in a line. One about 2 feet from the camera, the next 4 feet away and the third one 12 feet distant. Take photographs beginning with the largest aperture (i.e. f/2.8) and continuing to the smallest (i.e. f/22) focusing on the middle object. Process your images and study the effect of aperture on depth of field (DoF). Repeat focusing on the nearest object.

# BASIC PHOTOGRAPHY: CAPTURE ISO

## WHAT IS ISO?

“In *film photography* ISO is the indication of how sensitive the film is to light. The film is measured in numbers such as 100, 200, 400, and 800. Faster film, that is, film with a higher ISO rating (like 800), requires less exposure to make a good image. The lower the number, the lower the sensitivity of the film and also less grain in your image.”

*Ryan Greenleaf*

# WHAT IS ISO?

**“Is ISO “Sensor Sensitivity”?** This is the most common myth related to ISO. It is something you will see all over the web (and in print). However, although it may help you to think of ISO as “acting like” camera sensor sensitivity, that’s not what it actually does. Instead, digital sensors only have a single sensitivity, regardless of your ISO. It is more accurate to say that ISO is like a *mapping* to tell your camera how bright the output photo should be, given a particular input exposure.”

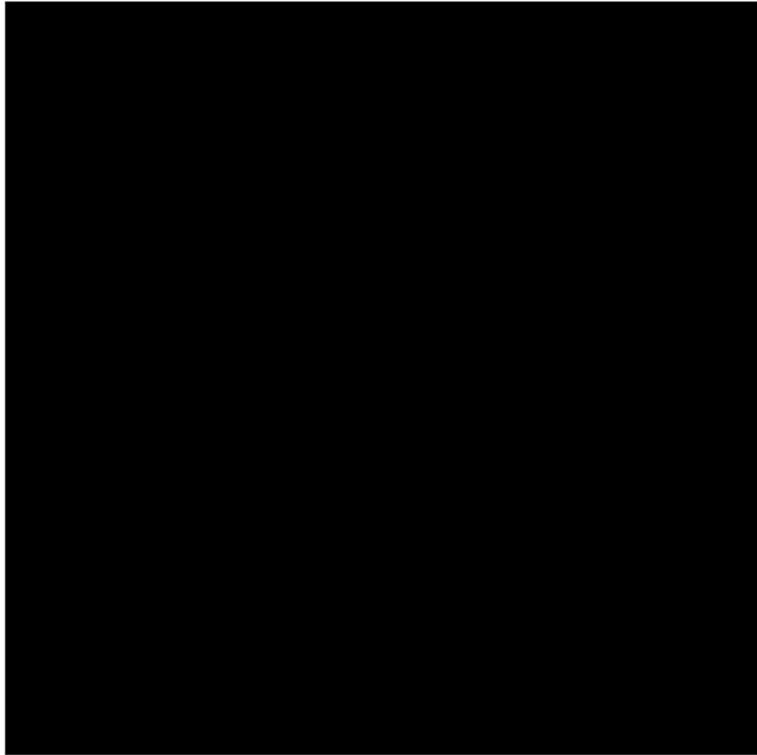

*Spencer Cox*

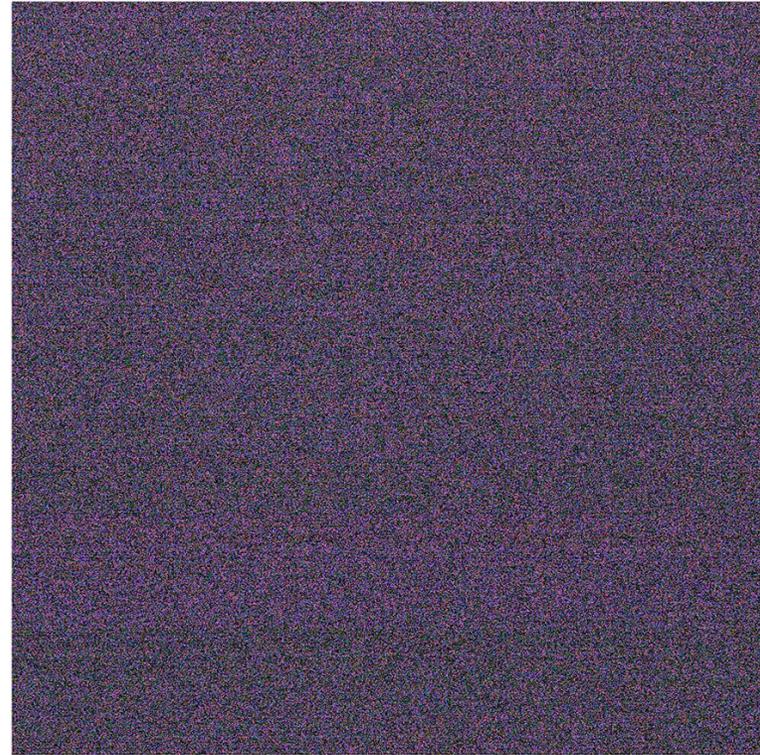

**YOUR SENSOR**

# IS NOISE IS ALWAYS PRESENT?

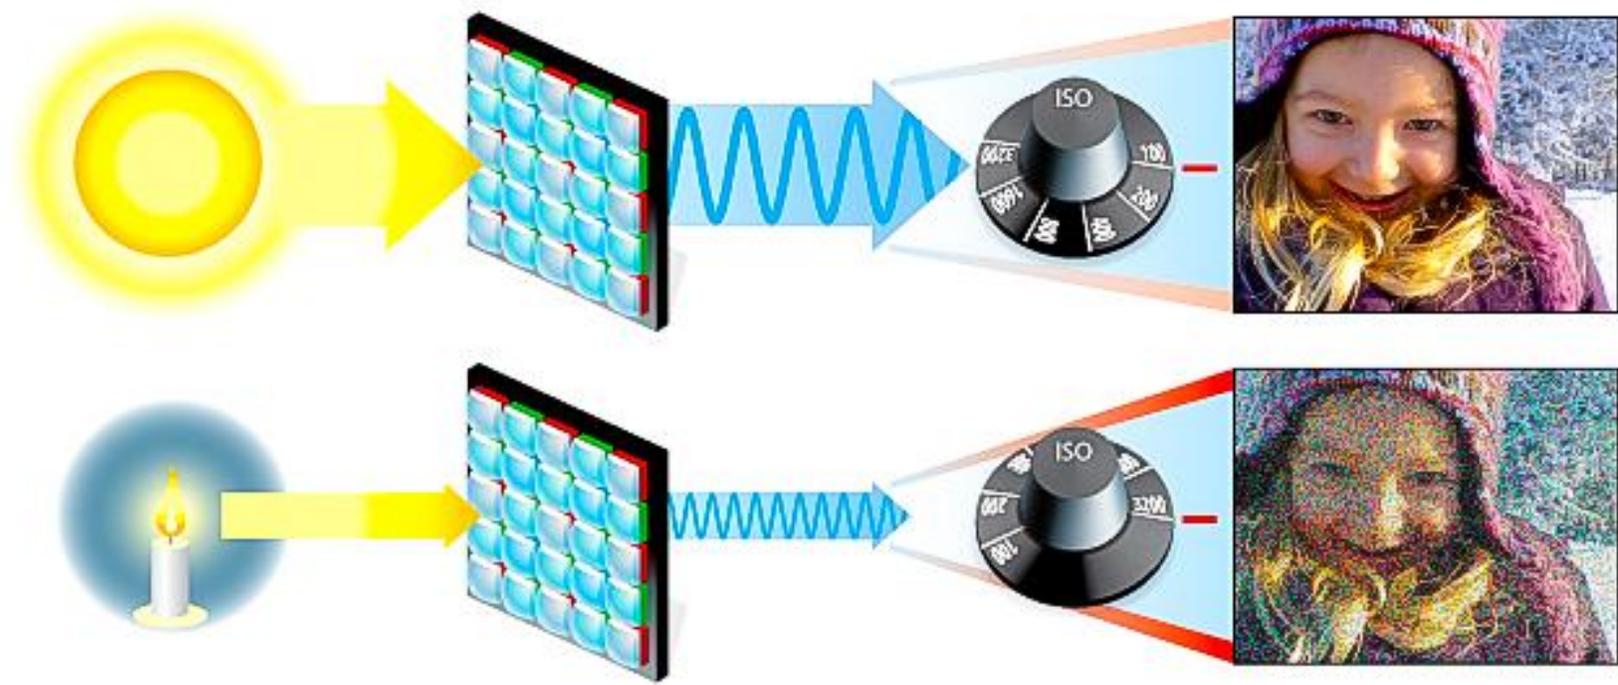

Lens Cap Photo

Same Photo, Brightened a Lot

# SIGNAL TO NOISE RATIO

# WHAT IS YOUR CAMERA'S **BASE ISO**?

**BASE ISO** IS THE SETTING THAT THE ENGINEERS THAT DESIGNED THE SENSOR DETERMINED WOULD PRODUCE THE GREATEST DYNAMIC RANGE WITH THE LEAST AMOUNT OF NOISE.

“Dynamic range refers to the range of tones in a scene, from the darkest, blackest shadows to the brightest, most brilliant highlights. The more tonal range present in a scene, the greater the dynamic range.” Simon Ringsmuth

“Noise in photography can be defined as a random variation in the image signal. Noise can be caused by a number of factors, including poor lighting conditions, high ISO settings, long exposure times, and heat.” Adobe

# WHAT ISO SHOULD YOU USE?

**IT DEPENDS**

**FOR THE BEST IMAGE QUALITY, SELECT THE LOWEST ISO POSSIBLE GIVEN THE SHUTTER SPEED AND APERTURE YOU HAVE SET FOR THE EXPOSURE.**
