DCC AND PPC COMBINED TRAINING  
2025

# WHAT DID WE TALK ABOUT?

“WOULD YOU TELL ME PLEASE, WHICH WAY I OUGHT TO GO FROM HERE?”

“THAT DEPENDS A GOOD DEAL ON WHERE YOU  
WANT TO GET TO.”

“I DON'T CARE MUCH WHERE-”

“THEN IT DOESN'T MATTER WHICH WAY YOU GO.”

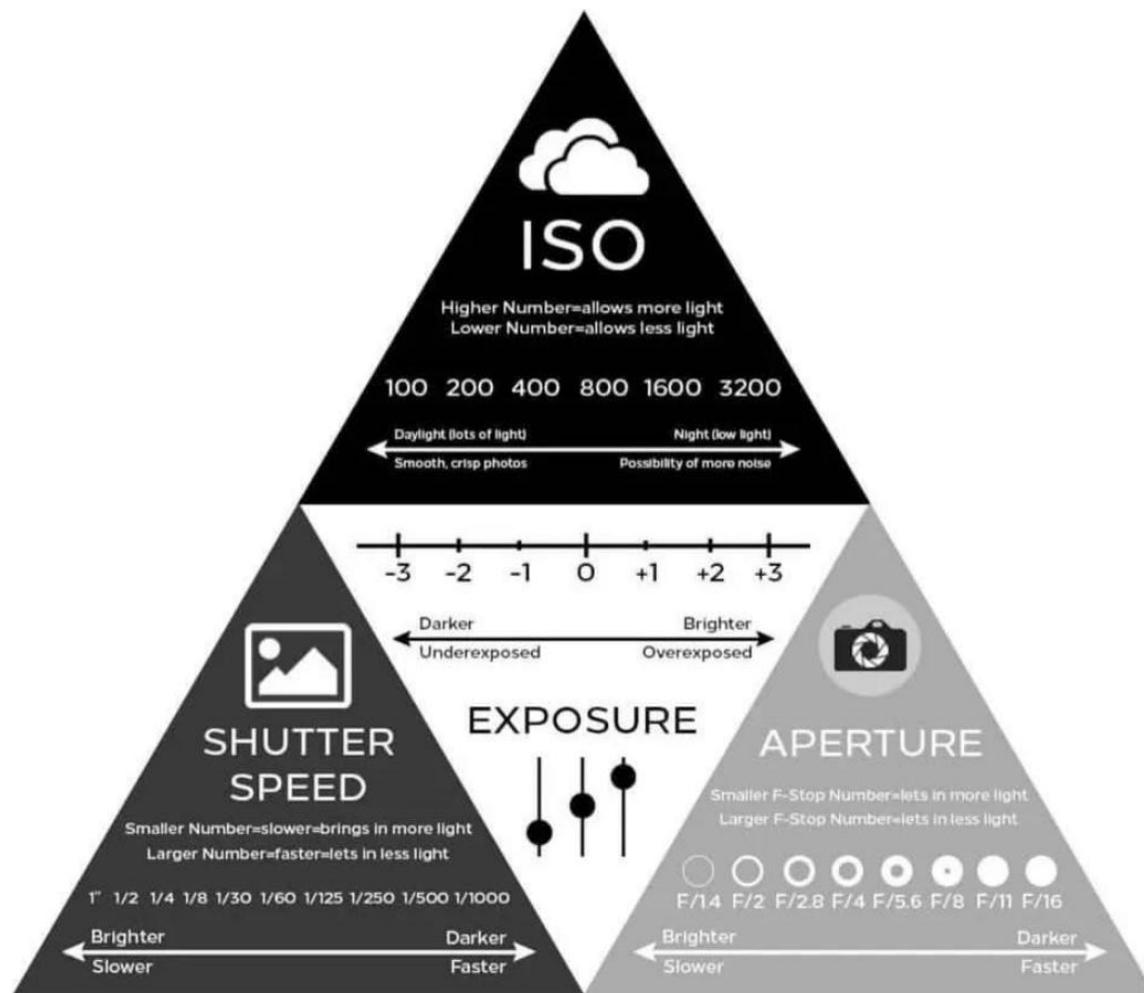

-LEWIS CARROL

# WHAT DID WE TALK ABOUT?

1. LEARNING TO PHOTOGRAPH WITH **INTENTION**
2. NEEDING TO KNOW **HOW TO** OPERATE YOUR CAMERA
3. WHAT **EXPOSURE** IS
  1. SHUTTER SPEED
  2. APERTURE
  3. ISO

# THE EXPOSURE TRIANGLE

# Camera Imaging Sensor with Bayer Filter

# HOMework

- SET YOUR CAMERA TO RECORD MONOCHROME JPEG FILES
- MAKE A SERIES OF PHOTOGRAPHS OF A WHITE SURFACE (TYPE PAPER OR WALL) USING MANULE MODE.
  - “CORRECT”
  - 1 & 2 STOPS OVER
  - 1 & 2 STOPS UNDER
  - (For extra credit, repeat with black paper)
- DO NOT FORGET TO RESET CAMERA!

# THE HISTOGRAM

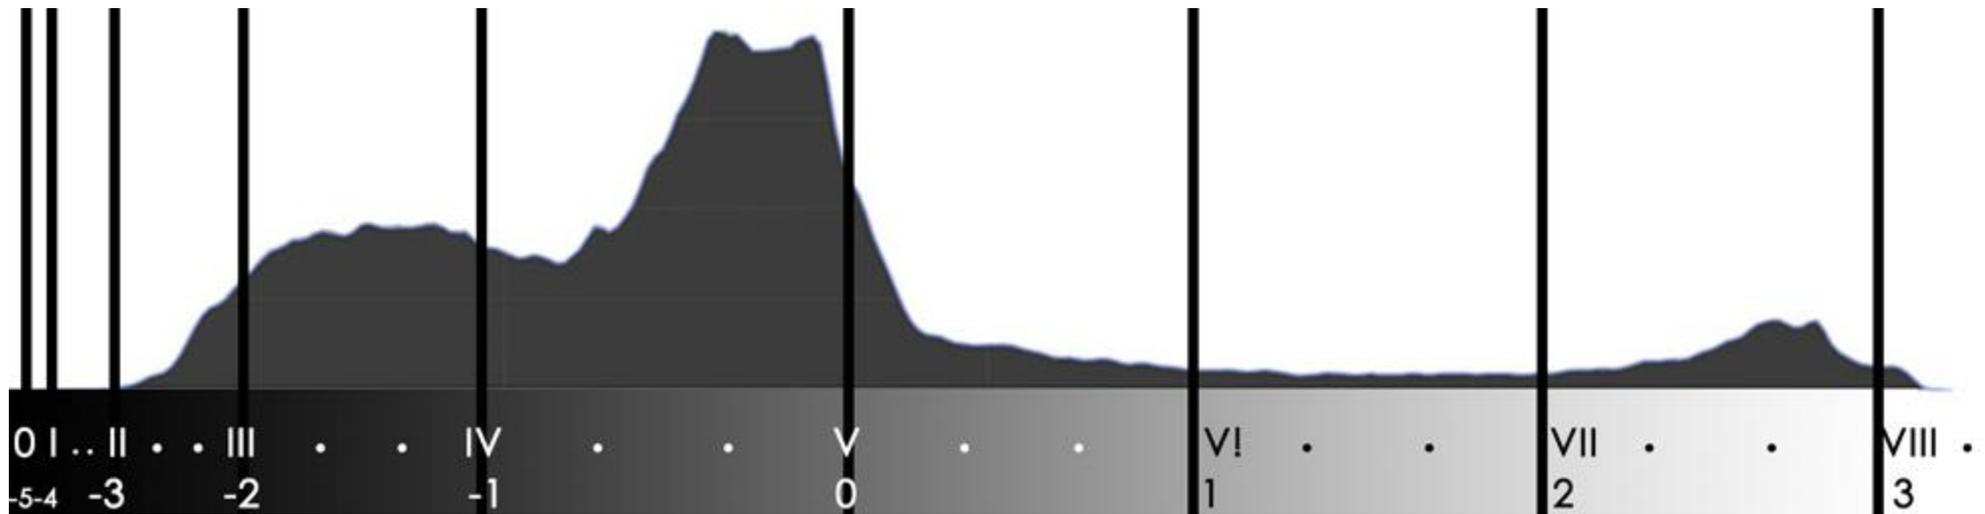

## DYNAMIC RANGE

### The Zone System

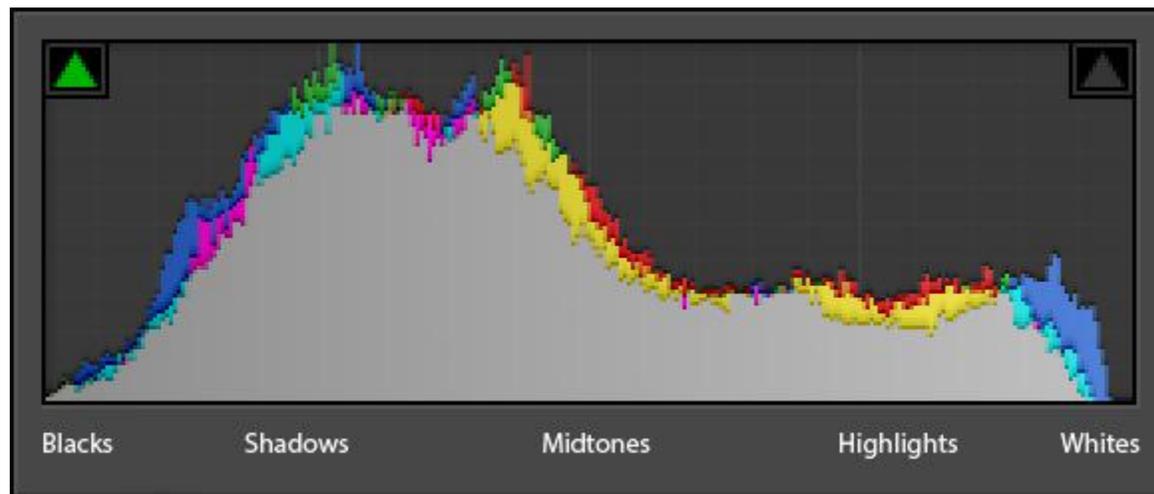

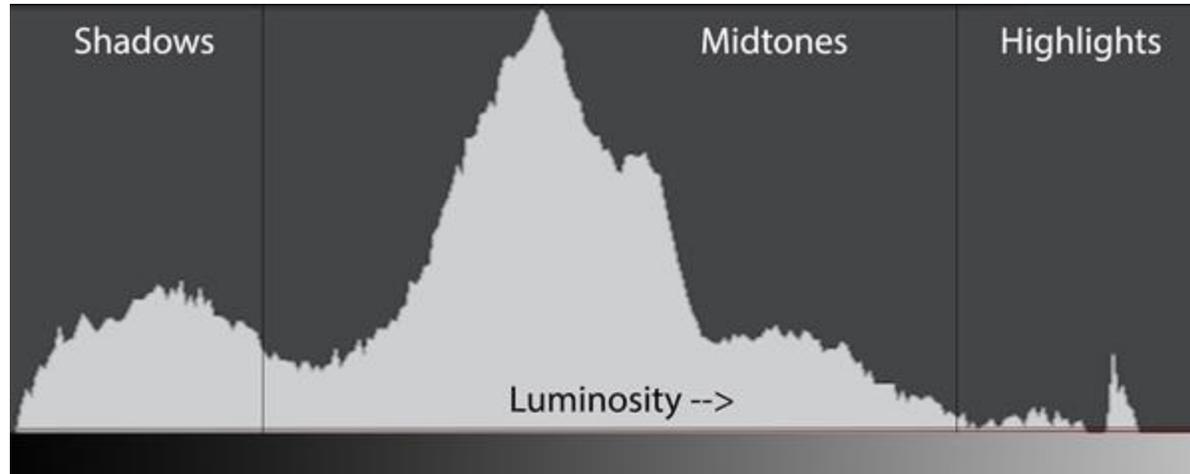

(ANSEL ADAMS & FRED ARCHER, 1940)

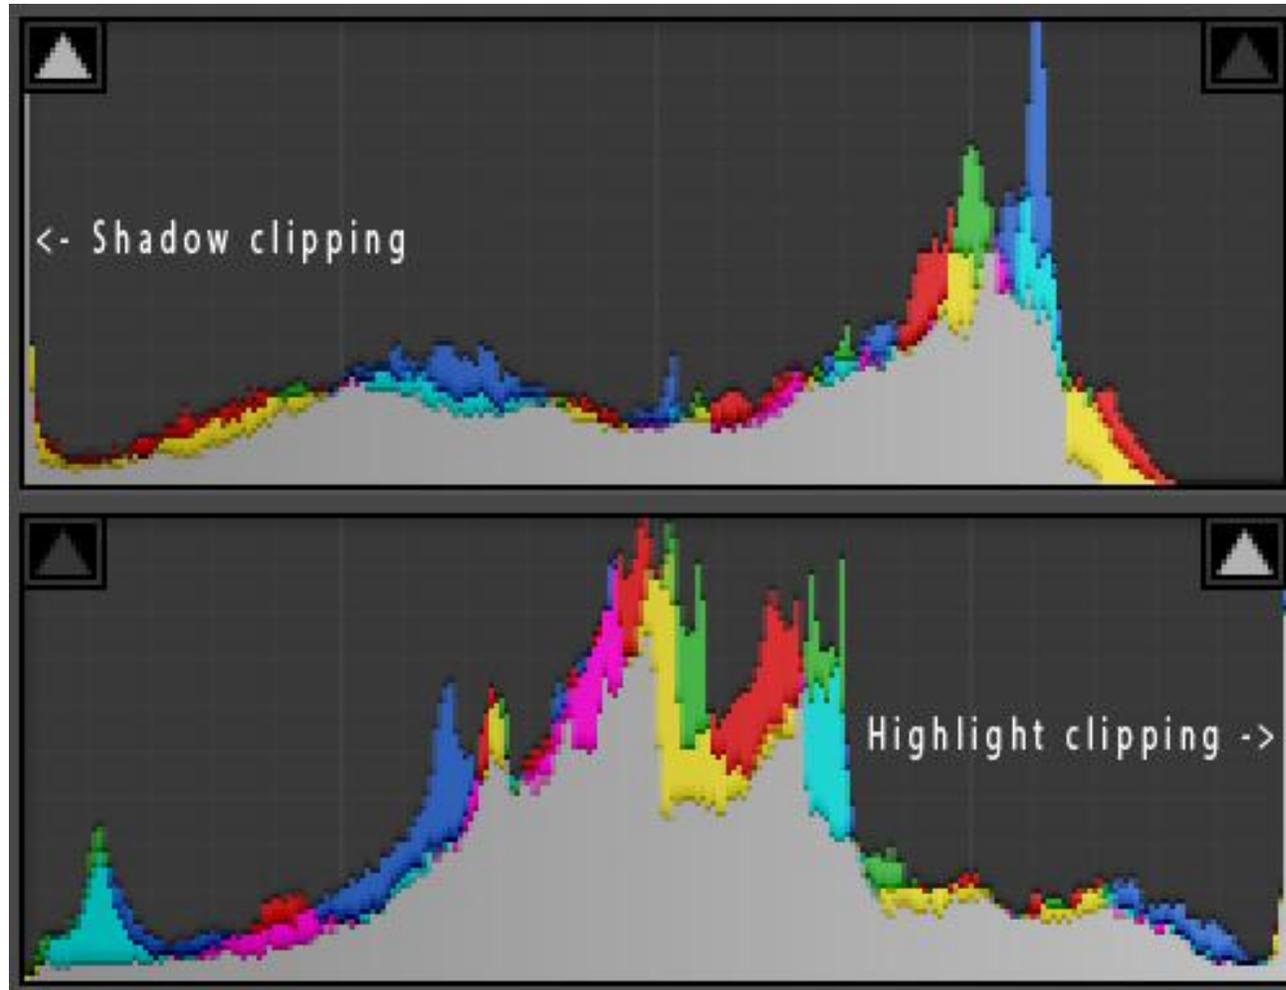

# THE HISTOGRAM

# HISTOGRAMS

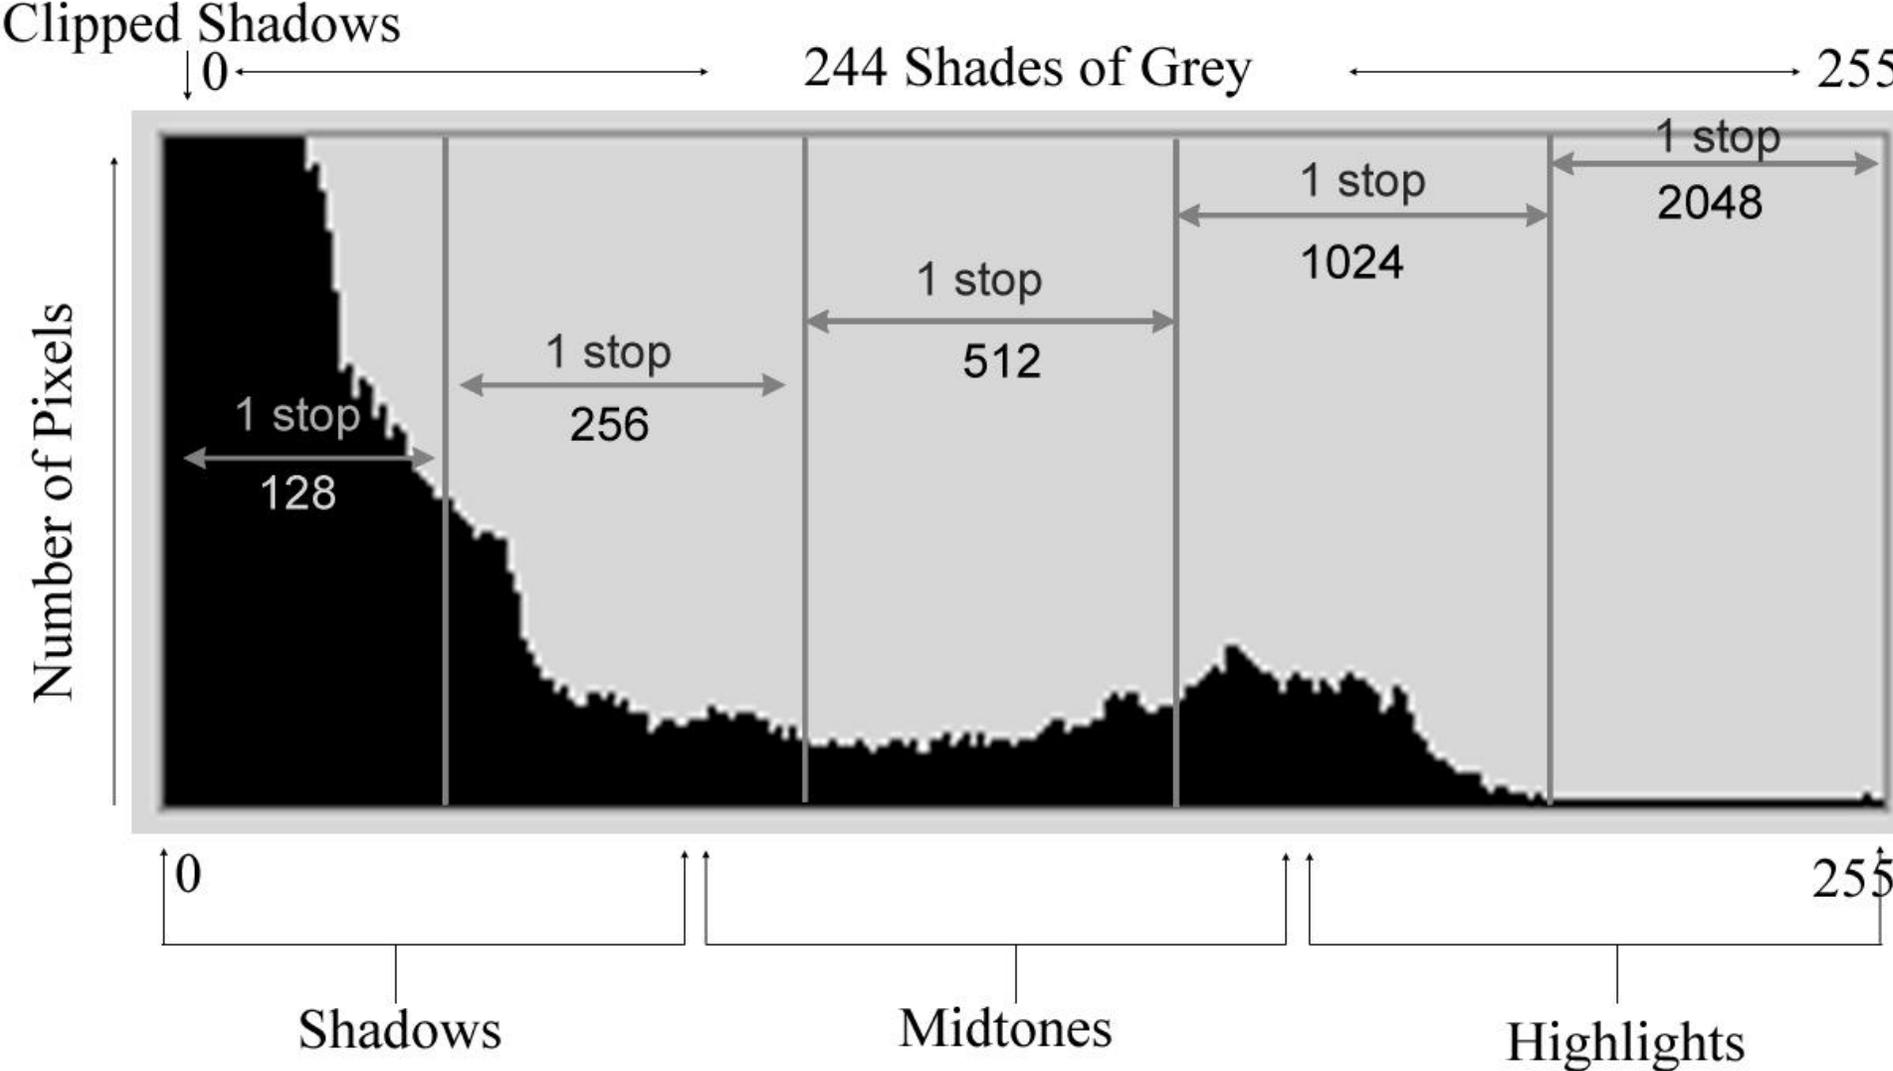

# HISTOGRAMS

# HISTOGRAMS

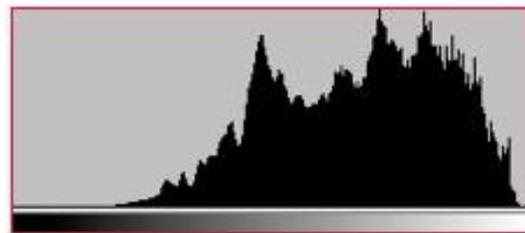

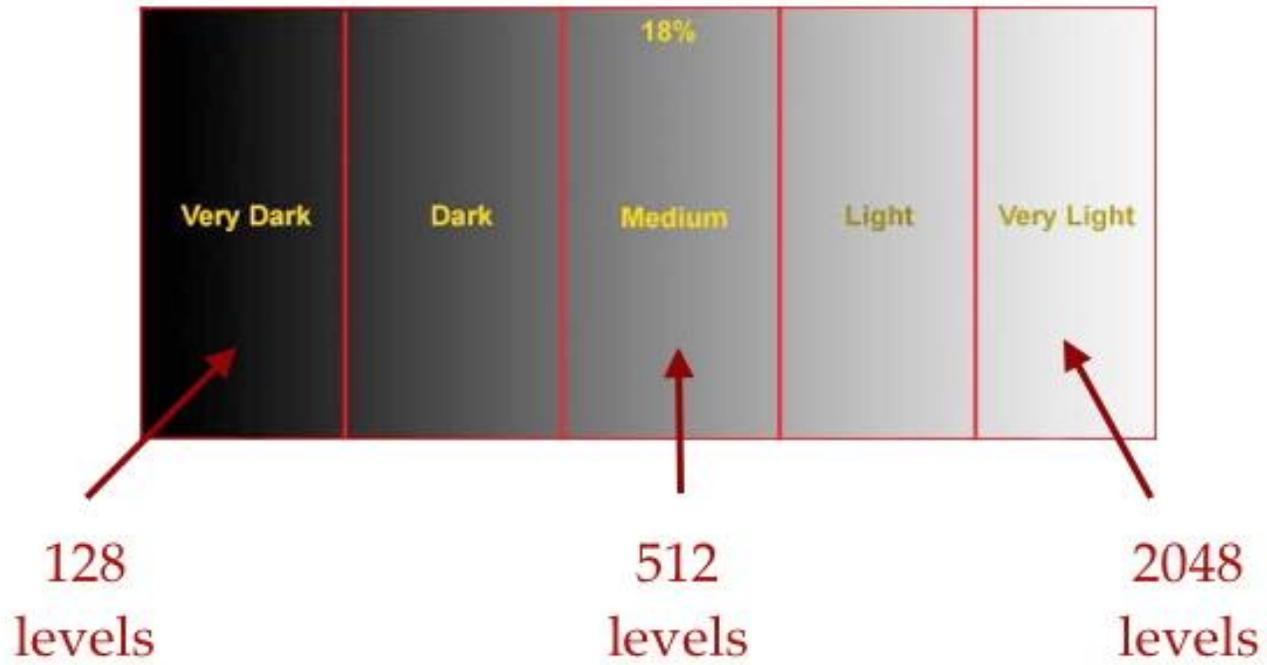

“All digital camera sensors capture light in a linear fashion, starting from black to white (left to right on the histogram). This means they capture fewer levels of information in the shadows, and the maximum number of levels in the highlights, just before clipping. In other words, the sensor is much more sensitive to brighter levels of light than darker ones.” Robert Rodriguez, Jr.

# HISTOGRAMS

# HISTOGRAMS

12-bit RAW file

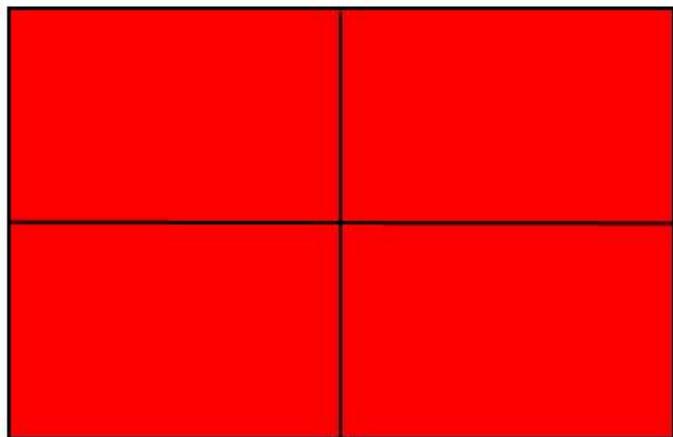

# HISTOGRAMS

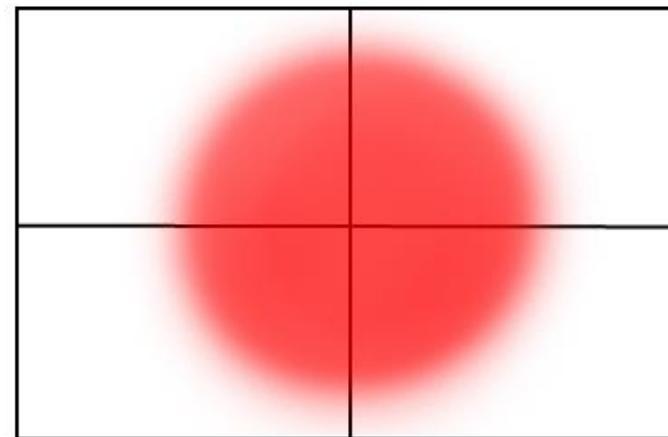

“This is the main reason why we see digital noise in the shadows and not the highlights. The “signal to noise” ratio is much higher in the highlights, therefore noise can only rear its ugly head in the shadows where this ratio is much lower.”

Robert Rodriguez, Jr.

# EXPOSURE COMPENSATION

“Exposure Compensation allows photographers to override exposure settings picked by camera’s light meter, in order to darken or brighten images before they are captured.”  
(photographylife article)

# EXPOSURE COMPENSATION: WHAT I DO AND WHY

- MOST OF THE TIME I USE PATTERN (MATRIX, EVALUATIVE) METERING.
- I GERNERALLY SHOOT IN APERTURE OR SHUTTER PRIORITY.
- I HAVE OVER AND UNDER EXPOSURE WARNINGS TURNED ON.
- I HAVE THE HISTOGRAM IN MY VIEWFINDER.
- I USE THE FRONT WHEEL TO EITHER BRIGHTEN OR DARKEN THE SCENE.
- USUALLY, I WILL PUSH THE EXPOSURE TO THE RIGHT.
- ***I NEVER RELY ON THE LCD TO EVALUATE THE EXPOSURE!***

### CAMERA METERED EXPOSURE (SHUTTER PRIORITY)

f/1.4	f/2.0	f/2.8	f/4.0	f/5.6
1/1000	1/500	1/250	1/125	1/60

### SHUTTER PRIORITY, -1 EV<sup>\*</sup> EXPOSURE COMPENSATION

f/1.4	f/2.0	f/2.8	f/4.0	f/5.6
1/1000	1/500	1/250	1/125	1/60

### SHUTTER PRIORITY, +1 EV EXPOSURE COMPENSATION

f/1.4	f/2.0	f/2.8	f/4.0	f/5.6
1/1000	1/500	1/250	1/125	1/60

\* “EV” = Exposure Value

# EXPOSE TO THE RIGHT (ETTR)

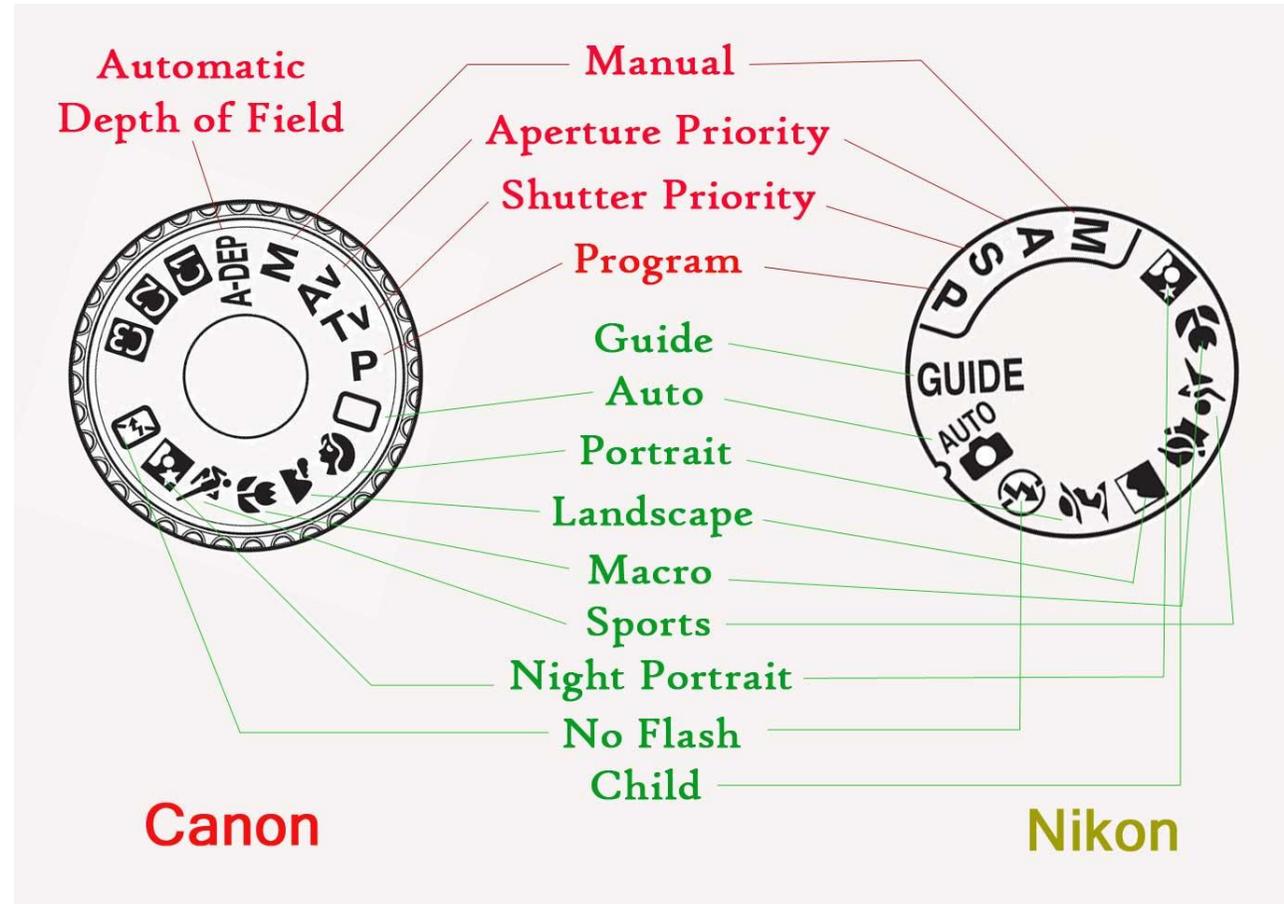

The basis of ETTR is simple: optimize your exposure, and get the highest-quality image possible. Most people expose a scene so that the image looks how they want — and, at face value, this makes sense. Optimum exposure is different, though. Instead of exposing the scene “correctly”, it is better to expose a scene to be as bright as possible, without blowing out the scene’s highlights and losing all of that data. Then, in post-processing, you darken the image so that it looks how you want. (Spencer Cox, [Exposing to the Right Explained \(photographylife.com\)](http://photographylife.com))

# EXPOSE TO THE RIGHT (ETTR)

By darkening an exposure in post-processing, you are effectively using a lower-than-base ISO. It brings similar benefits, too — **a decrease in image noise, richer colors, and a greater dynamic range**. Images exposed using ETTR are more malleable in post-processing, making it easier to produce the photo you have in your mind's eye.

(Spencer Cox, [Exposing to the Right Explained \(photographylife.com\)](http://photographylife.com))

# CAMERA MODES and SHOOTING MODES

# HOMEWORK

The purpose of this exercises is to gain a better understanding of exposure compensation and “Expose to the Right” (ETTR). You may need to access your camera’s instruction manual or find a YouTube video to help you enable the over and under exposure warnings.

1. Compare and contrast photographs of the same scene taken at an exposure set by your camera to exposures above and below the camera settings.
2. Take a shot using any metering mode you wish and then repeat it as an under exposure and again using ETTR. Process the over and under exposure files to look like the exposure your camera suggested and compare the image quality of the three images.

**(Extra credit: watch Dennis’ training video from his March 13<sup>th</sup> Master Class on Caddo Sunrise.)**

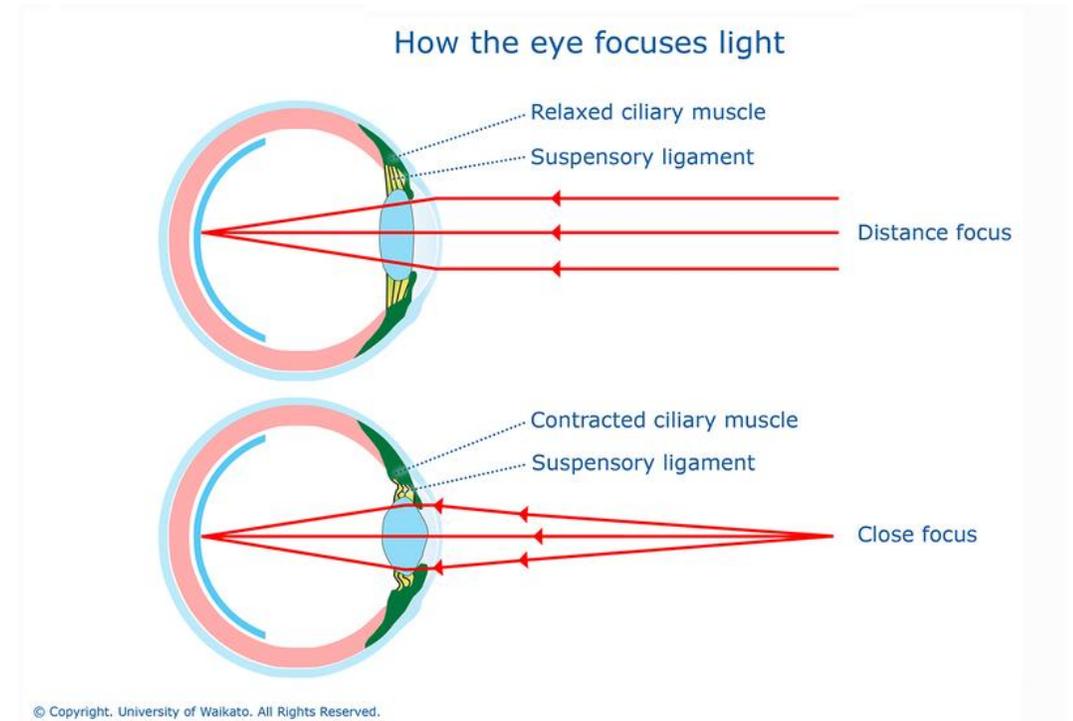

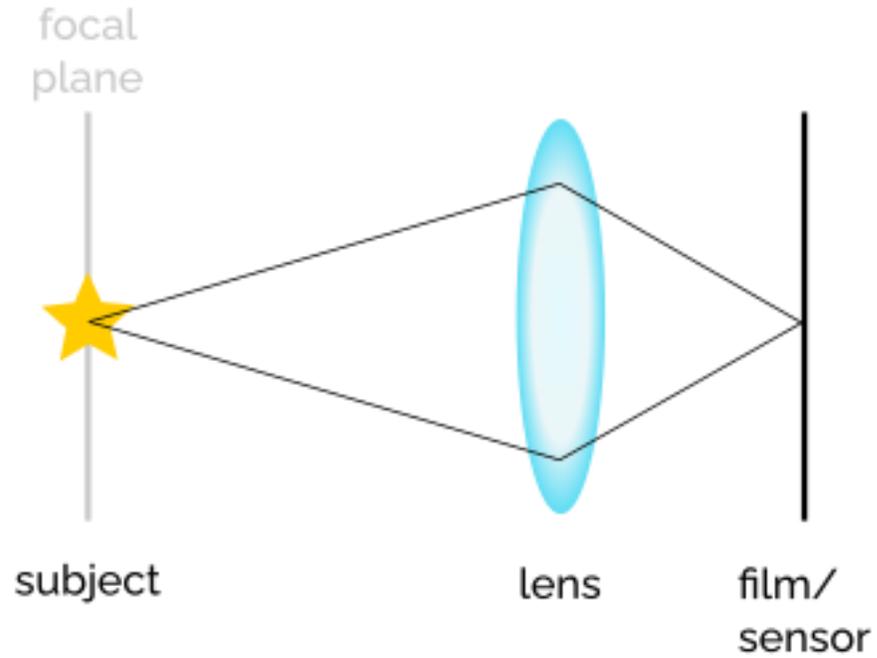

# JPEG or RAW

[Everything you need to know about JPEG files | Adobe](#)

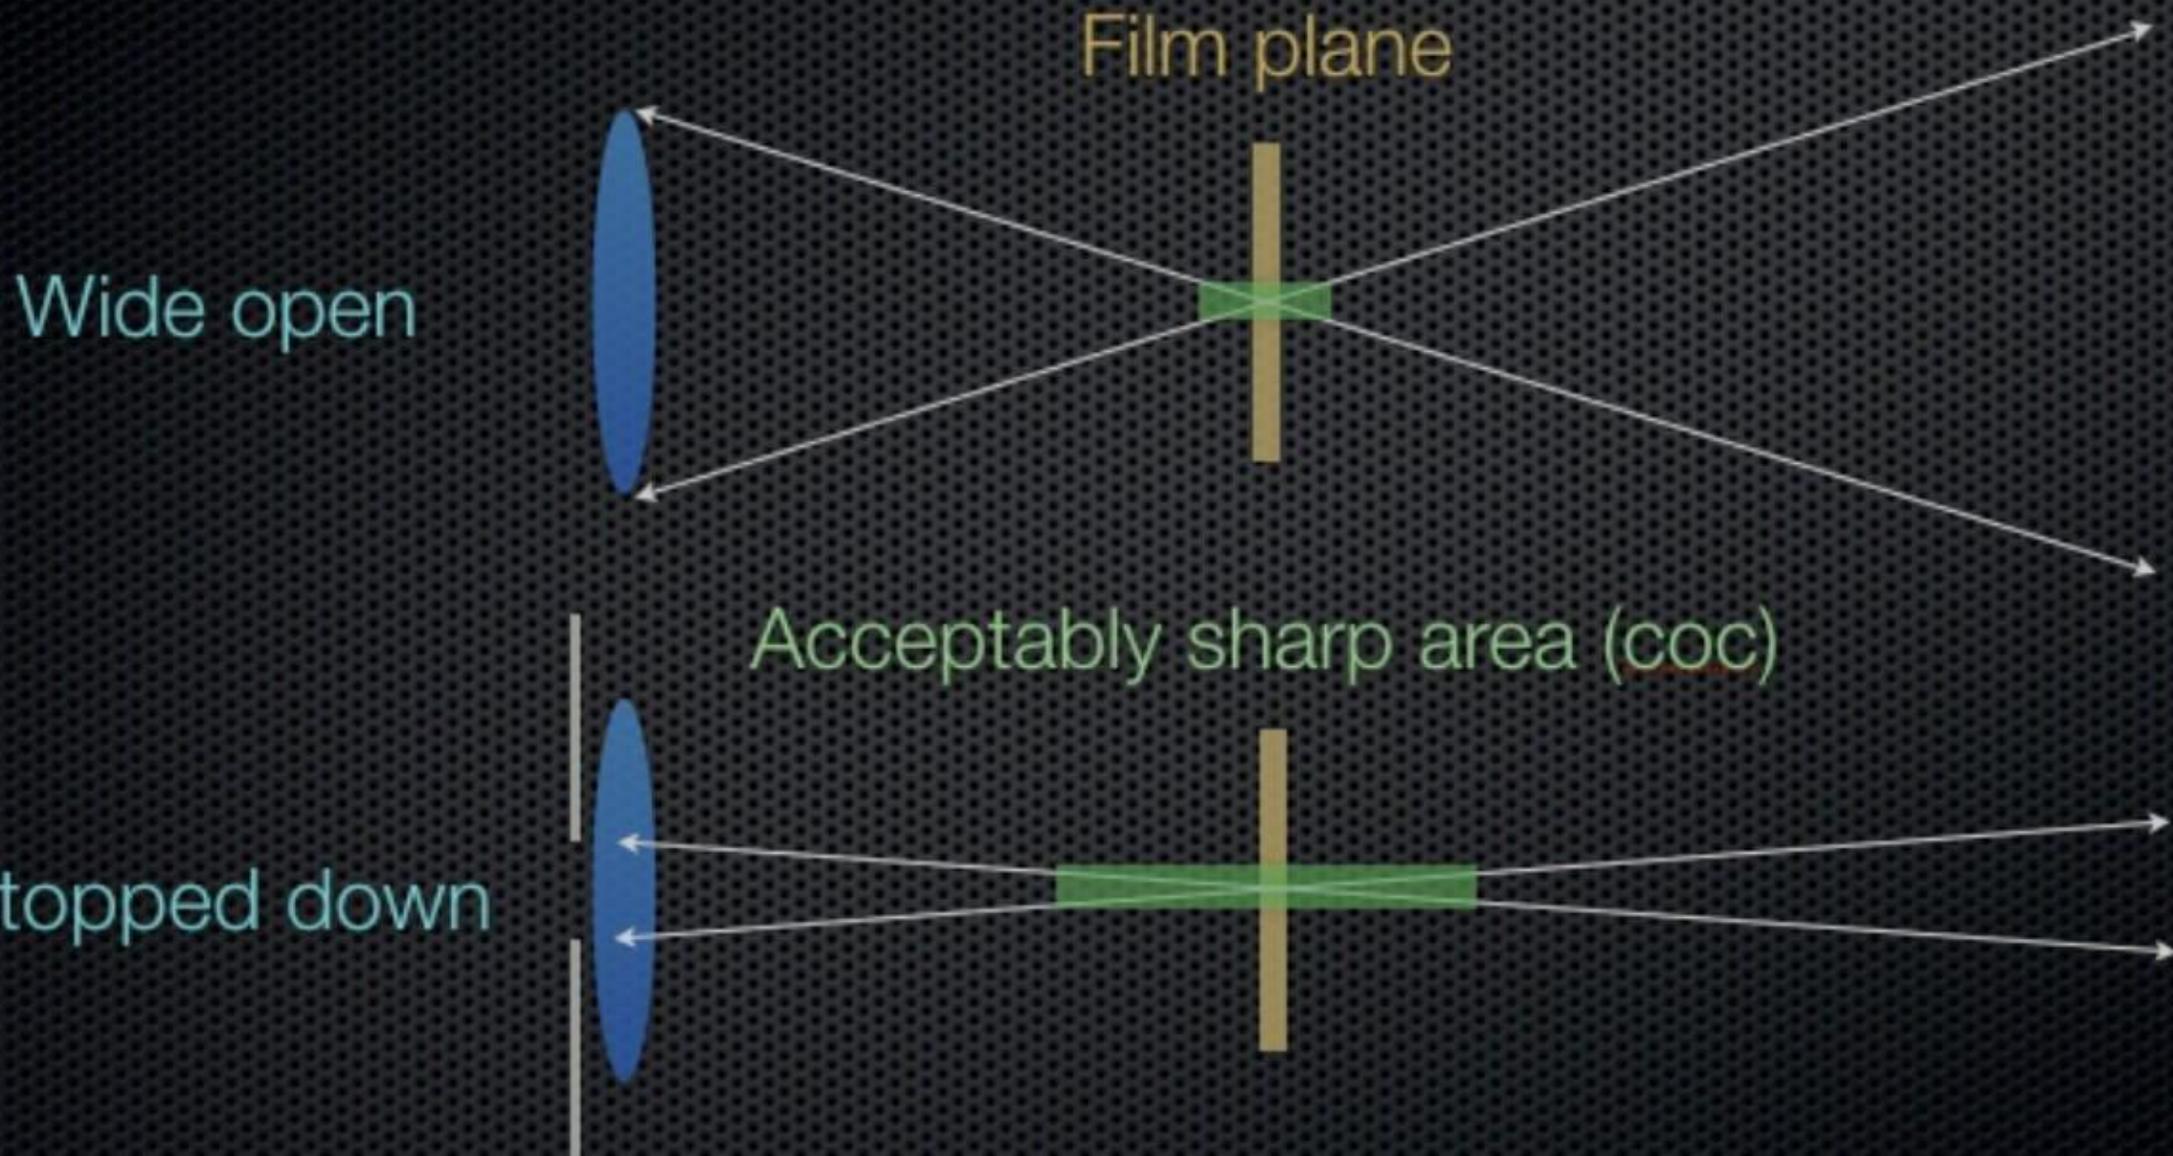

1. In 1986, the Joint Photographic Experts Group (JPEG) created a standard to compress graphics files enough to work on a PC.
2. JPEG files came into their own with the advent of digital cameras and the World Wide Web. Contains *metadata*.
3. JPEG compress the data to make the files smaller, i.e. **“LOSSY”**
4. A RAW file is the **uncompressed and unprocessed image data** captured by a digital camera or scanner’s sensors. Shooting in RAW captures a high level of image detail, with large file sizes and lossless quality. Gives you the most data to work with.
5. RAW files are proprietary.

# FOCUS

# Depth of Field

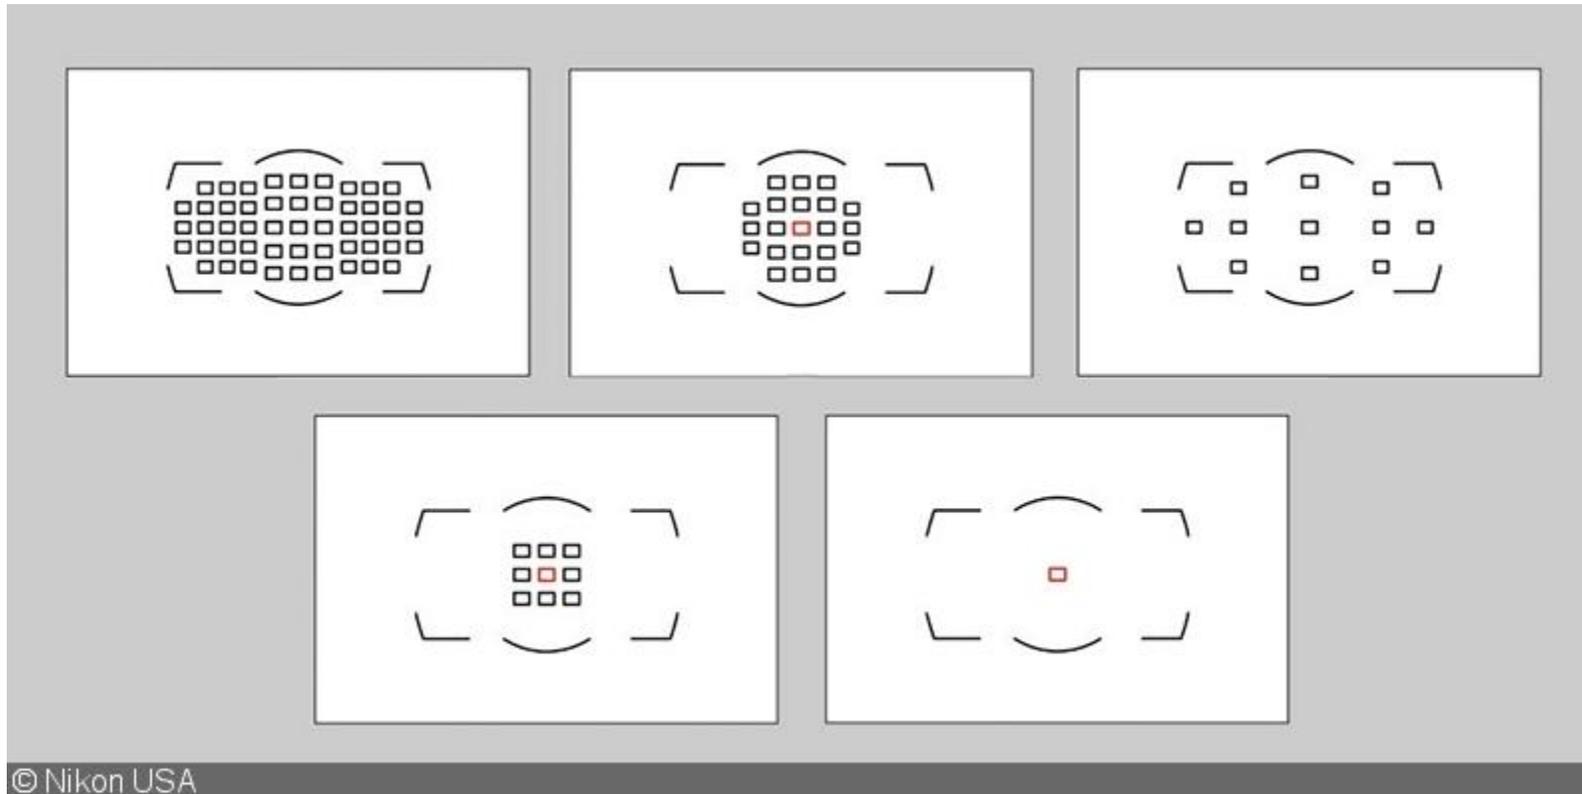

# BOKEH

Bokeh is a word with Japanese origins, defined as “the way the lens renders out-of-focus points of light.” The word comes from the Japanese word boke (暈け or ボケ), which means “haze” or “blur.” (The “h” was introduced to help English speakers pronounce the word correctly [BO - KEH].)

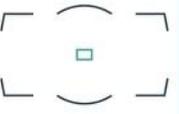

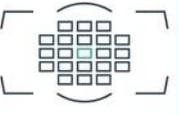

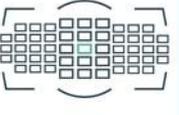

[Seriously...What's the Correct Pronunciation of 'Bokeh?' | No Film School](#)

“BO KAY”

# FOCUS

## UNDERSTANDING CAMERA AUTOFOCUS AREA MODES

AF AREA MODES	HOW IT WORKS	WHEN TO USE IT
<b>SINGLE POINT AREA MODE</b> (SINGLE POINT AF / MANUAL AF POINT)	<ul style="list-style-type: none"> <li>You can select a single focus point</li> <li>Gives more control and precision</li> <li>The more focus points your camera has, the more precisely you can focus on your subject</li> </ul>	<b>Best AF Area for static subjects:</b> <ul style="list-style-type: none"> <li>Landscape</li> <li>Still Portraits</li> <li>Macro</li> <li>Architecture</li> </ul> 
<b>DYNAMIC AREA MODE</b> (DYNAMIC AF AREA / AF POINT EXPANSION)	<ul style="list-style-type: none"> <li>Once you select your focus point, if your subject moves, the camera uses the selected point as well as the surrounding points to keep the subject sharp.</li> <li>Modern cameras allow to select different areas in groups of 9, 21, 51 points, etc, depending on your subject and movement.</li> </ul>	<b>Best AF Area for moving subjects:</b> <ul style="list-style-type: none"> <li>Wildlife</li> <li>Sports</li> </ul> 
<b>AUTO AREA MODE</b> (AUTO AF AREA / AUTOMATIC AF POINT SELECTION)	<ul style="list-style-type: none"> <li>This mode is completely automatic</li> <li>The camera decides which focus points to use for a given scene</li> <li>It can focus on the wrong subject/area. Not recommended when you need more control over your focus point.</li> </ul>	<b>Best AF Area for:</b> <ul style="list-style-type: none"> <li>Scenes where you want to quickly focus on something easy and close to the camera</li> </ul> 
<b>EYE AUTOFOCUS</b> (EYE-AF)	<ul style="list-style-type: none"> <li>The camera automatically detects the subject's eye</li> <li>Modern cameras can track the eyes of different subjects even if they're in motion</li> </ul>	<b>Best AF Area for:</b> <ul style="list-style-type: none"> <li>Portraits of people/wildlife</li> </ul> 

Each camera manufacturer uses different nomenclature for the same Autofocus Area Modes. Check your camera manual to find your camera Autofocus Area names.

# TAKING SHARP PHOTOS: Causes of Image Softness

1. Subject is moving.
2. Camera is moving.
3. Subject is not in focus.
4. Lens and/or filter is dirty.
5. Cheap lens.
6. High ISO capture.
7. Small aperture.
8. Mirror “slap” in DSLR.
9. Image stabilization in use on a tripod.
10. Atmosphere.

# WHAT WOULD YOU DO?

## PUTTING IT ALL TOGETHER

# WHAT WOULD YOU DO?

1. WHAT ARE MY PRIMARY GOALS FOR THIS SHOOT?
  1. PHOTOGRAPHING DANCERS IN MOTION
  2. MAKE INTERETING IMAGES
  3. DON'T GET IN THE WAY
2. WHAT ARE THE IMPORTANT PHYSICAL CONSIDERATIONS?
  1. LIGHTING CONDITIONS
  2. SPACE LIMITATIONS
  3. CLUTTERED BACKGROUNDS
3. HOW CAN I ACHIEVE MY GOALS?
  1. FAST SHUTTER SPEED, SUBJECT/EYE DETECTION, SHOOTING POSITION, OVEREXPOSE, SHOOT WIDE, SILENT BURST

F/4, 1/1000 sec, +1 EV, Auto ISO

ISO 80, F/4, 1/13 sec,  
+1 EV, Aperture Priority
